AN END-TO-END PROGRAM

for building technical platforms, tailoring solutions
and seamlessly integrating

Communications networks are growing larger all the time. Often they end up looking and performing like a mix and match menagerie of hardware platforms, architectures and software applications. Service providers must navigate this veritable obstacle course of incompatibility, using makeshift bridges to connect "islands of automation" – to build a cohesive, operational network that delivers state-of-the-art services faster than the competition.

AND THAT'S JUST TODAY.

WHAT ABOUT THE ADAPTATIONS AND NEW

Sun's integrated communications solutions, developed and implemented in alliance with leading service providers and vendors, offer modular added-value capabilities to navigate and take control over ever growing and complex communications networks. The program offers end-to-end solution sets that deliver consistent, seamless integration of OSS/BSS systems. It eliminates barriers posed by management and overcomes challenges of service activation across incompatible systems.

The program starts with Sun™ technology and foundation ISV hardware; leverages open-standards such as Java™ technology and CORBA; and integrates best-of-breed commercial off-the-shelf (COTS) products and applications, helping to enable service providers to roll out new services rapidly, cost-effectively and intelligently.

THE BENEFITS OF SUN SOLUTIONS FOR THE COMPETITIVE EDGE

- Reduces operating costs
- Speeds up time-to-market
- Offers best-of-breed applications
- Enables flexible, dynamic introduction of new services
- Leverages investment in legacy system integration
- Offers freedom of choice in hardware and software applications

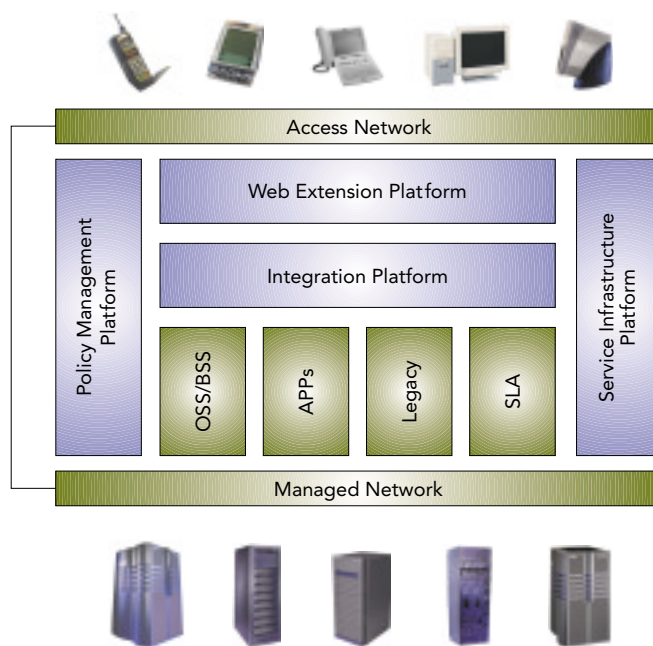

FEATURES

- Scalable and flexible framework
- Supports open standards
- Facilitates use of reusable components
- Web-enabled self-service and process automation
- Uniform API reduces integration cycle
- Process automation for quick deployment

solutions to fit specific needs,
 ISV and SI applications for telecommunications.

Sun's Integrated
 Communications
 Solutions—Platform Components

NEW SERVICES SCHEDULED FOR TOMORROW?

INTEGRATION PLATFORM

connects and mediates directly between COTS applications, legacy applications, data and business-to-business process automation.

WEB EXTENSION PLATFORM

provides the standard development, deployment, and runtime environment to extend applications to intranets or the Internet.

POLICY MANAGEMENT PLATFORM

includes hierarchical organization information, user identities, security, access control and directory services.

SERVICE INFRASTRUCTURE PLATFORM

provides standard application interfaces, access to legacy systems and unified application and middleware component management across systems.
